		N	N
Check sum	16 bit	16 bit	URGENT Pointer
Options & Padding	40 Bytes		

TCP Header (20-60 B)

TCP (Transmission Control Protocol)

- Byte Streaming
- Connection Oriented - 3 way.
 - Reliability.
- Full Duplex
- Piggybacking
 - GBN
 - SR.
- Error Control
- Flow Control
- Congestion Control

- should be of minimum 20 byte and maximum 60 byte.

65: TCP: Transmission control protocol TCP Header									
Source Port 16 bit					Destination Port 16 bit				
Sequence Number 32 bit									
Acknowledge No. 32 bit									
HLEN 4 bit		6	U	A	P	R	S	F	WINDOW Size 16 bit
			R	C	S	S	Y	I	
			G	K	H	T	N	N	
Checksum 16 bit					16 bit URGENT Pointer				
Options & Padding 40 Bytes									

0/00

= 16

1000 8x4=32 TCP Header (20-60 B)
Scale of 4. 20x8=160 bits

2¹⁶
0-65535

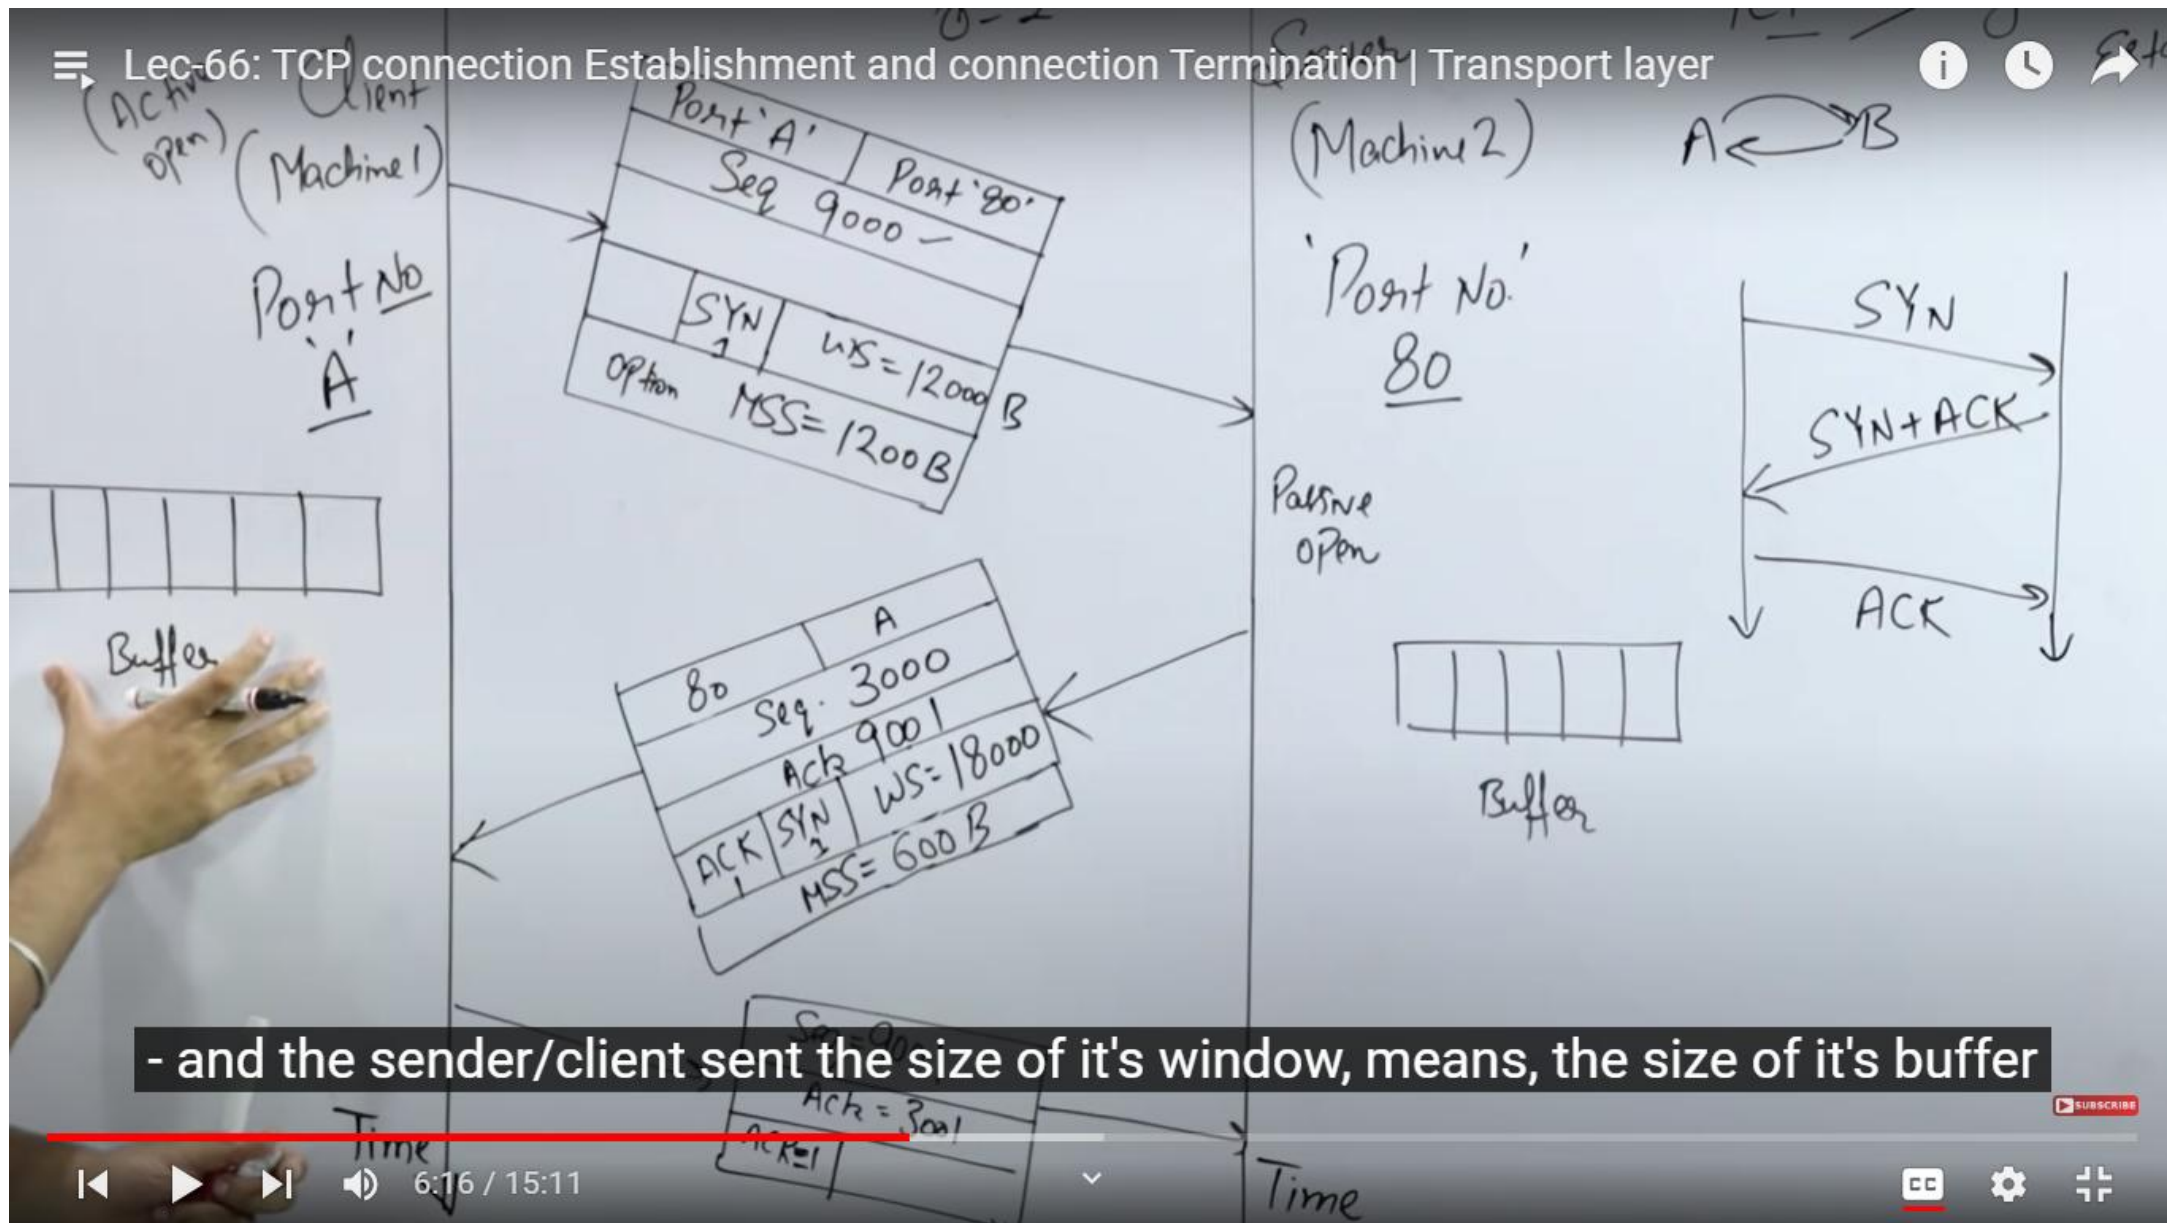

0-1023 - well known

- Byte Streaming
- Connection Oriented
- Full Duplex
- Piggybacking
- Error Control
- Flow Control
- Congestion Control

after that comes 6. Here the 6 bits are reserved for future use

Lec-66: TCP connection Establishment and connection Termination | Transport layer

Post No.
80

Passive
open

$$\frac{180\phi\phi}{6\phi\phi} = \text{Buffer} = 30$$

Reihe

80		A
Seq.		3000
Ack		900 ✓
ACK	SYN	WS = 18000
1	2	= 600 B

- synchronisation is already there and plus acknowledgement is also there

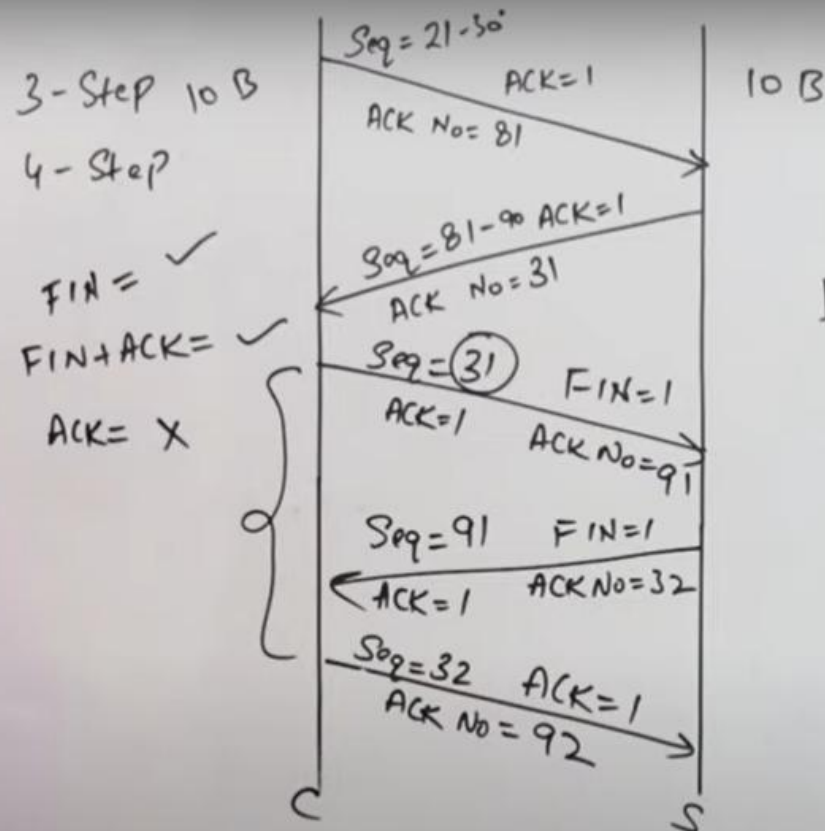

Lec-67: TCP Data Transfer | Piggybacking & Pure Acknowledgement

So these points can be asked to you somewhere.

≡ Lec-68: Connection Termination in TCP in Hindi with example

It will not consume sequence number.

≡ Lec-69: TCP Congestion Control in Computer Networks in Hindi

** Let the size of Congestion window of a TCP Connection in two cases when

Case 1: Timeout occurs

Case 2: 3 ACK Received

is 32 KB. The RTT of a connection is 100 msec and MSS = 2 KB. The time taken (msec) by TCP Connection to get back to 32 KB Congestion Window is — and — respectively.

Case 1 Timeout

☰ Lec-69: TCP Congestion Control in Computer Networks in Hindi

** Let us find the Congestion window of a TCP Connection in two cases when
 Case 1: Congestion occurs (Severe)
 Case 2: Congestion is Received (Light)
 is 32 KB. The RTT of a Connection is 100 msec and MSS = 2KB. The time taken (msec)
 by TCP to get back to 32 KB Congestion Window is 1200 and 900 respectively.

Case 1 Timeout Threshold = $\frac{32}{2} = 16$ $\frac{33}{2} = 16.5 \rightarrow 16$
 32 ↑ 2 4 8 16 18 20 22 24 26 28 30 32
Case 2 32 ^{3ACK} ↑ 16 18 20 22 24 26 28 30 32
 12 × 100 = 1200 msec
 9 × 100 = 900 msec

more you will understand the applicability of that topic

UDP Applications Less overhead.

- 1) Query Response Protocol (One request one reply) [DNS, DHCP]
- *2) Speed (Online games, Voice over IP)
- 3) Broadcasting / Multicast [RIP]
- 4) Continuous Streaming [Skype, Youtube]
(Stateless)

This is a very important factor

TCP

Connection oriented
Reliable Ordering.

Error Control is mandatory

Slow transmission

More overhead

Flow Control, Congestion Control

UDP

1) Connectionless

2) Less Reliable (No order)

3) Error Control is optional

4) Fast transmission

5) Less overhead

6) No FC, CC

Session Layer

Session

HTTP

- Port no 80
- Itself not reliable but use TCP to achieve reliability
- Inband Protocol
- Stateless
- HTTP 1.0 Non-Persistent
- HTTP 1.1 Persistent
- Commands(Head, Get, Post, Put, Delete, Connect)

1:21 / 17:44

Introduction >

Method	Action
GET	Requests a document from the server
HEAD	Requests information about a document but not the document itself
POST	Sends some information from the client to the server
PUT	Sends a document from the server to the client
TRACE	Echoes the incoming request
CONNECT	Reserved
OPTION	Inquires about available options

We are accessing the metadata of document.

9:11 / 17:44

FTP

- Port no 20(DATA) & 21(Control)
- Data connection is non-persistent
- Control connection is persistent
- Not Inband
- Reliable
- Stateful

Dragging from your system files will get sent to its system.

10:36 / 17:44 • FTP >

SUBSCRIBE

SMTP & POP

- FTP is synchronous but SMTP & POP is both synchronous & asynchronous
- SMTP Port no 25 for pushing the mail
- By default, the **POP3 protocol** works on **two** ports: Port **110** - this is the default **POP3** non-encrypted port. Port **995** - this is the port you need to use if you want to connect using **POP3** securely.
- MIME(**Multipurpose Internet Mail Extensions**)

How are data mails transferred.

13:05 / 17:44

⌵ Lec-79: Persistent vs Non-Persistent HTTP | HTTP/1.0 vs HTTP/1.1

Persistent HTTP Connection (HTTP/1.1)

Non Persistent HTTP (HTTP/1.0)

- 1) Server leaves Connection open after sending response
- 1 RTT for all referenced object
- 2) Less overhead

- 1) It Requires 2 RTTs per object
- 2) More overhead

nothing like that.
